

Continuously assess, prioritize, & remediate exposures across your hybrid attack surface

GAIN GREATER INSIGHT

- + Aggregate security, asset, and infrastructure data for a complete picture.
- + Dynamically model your attack surface to visualize and assess security controls.
- + Understand exposure risk, prioritize vulnerabilities, and determine the optimal remediation.

MAKE SMARTER DECISIONS

- + Have the latest view of exposure at your fingertips at all times.
- + Inform actions with unparalleled threat intelligence.
- + Automate remediations to increase security efficacy.

BUILD BUSINESS RESILIENCY

- + Validate changes before mistakes are made.
- + Understand exposures before they become threats.
- + Achieve continuous compliance as new regulations are issued.

MAXIMIZE RESOURCES

- + Prioritize the exposures that reduce the most risk.
- + Increase speed and accuracy of decision making.
- + Focus scarce technical resources where it matters most to the business.

Skybox continuous exposure management platform

Skybox continuously assesses, prioritizes, and remediates cyber exposure risks that matter most across your hybrid attack surface. The Skybox continuous exposure management platform is comprised of attack surface management, vulnerability & threat management, and network and security policy management solutions — all built on a single dynamic security model for a comprehensive and panoramic view of your attack surface.

With Skybox, you create consistent, enterprise-wide exposure management programs that continuously map your attack surface, contextualize the results, assess, and prioritize the threats, and automate remediations to combat them.

- + Obtain a 360-degree hybrid attack surface view with threat intelligence and risk.
- + Get ahead and stay ahead of a dynamically changing attack surface.
- + Gain the context you need to solve security challenges better and faster.
- + Maximize effectiveness and impact by focusing on exposures with the most risk.
- + Fine-tune network security policies, and prioritize your defenses.
- + Simplify and automate compliance assessments across the hybrid attack surface.

Skybox gives you the power to continuously manage your exposure.

One platform. One unified approach to continuously managing threat exposure.

ATTACK SURFACE MANAGEMENT

Maintain a meticulously curated map of your network alongside a complete inventory of all the assets, applications, and users in your estate.

- + Identify those assets that are internet accessible to help detect, prioritize, and combat targeted attacks.
- + Use unique attack path analysis and simulation capabilities to uncover the precise routes potential attackers could exploit to compromise exposed assets across your network.
- + Analyze each step along the route, including the vulnerabilities, firewall device(s), configurations, and rules that would enable the attack — anticipating and mitigating the attack before it happens.

VULNERABILITY MANAGEMENT

Enrich your attack surface map by leveraging an array of 3rd party threat intelligence sources and the Skybox Threat Intelligence service, providing a holistic view of your vulnerability and threat exposure.

- + Assess and prioritize exposure risk based on multiple factors like severity, importance, exploitability, and network exposure, enabling you to focus resources on the highest risk vulnerabilities.
- + Beyond identification and assessment, leverage proactive and automated remediation suggestions and security controls for each vulnerability.
- + Automate responses through ITSM system integration. Even without immediate patching, Skybox provides alternative risk mitigations.

SECURITY POLICY MANAGEMENT

Harness the power of centralized security policy management, gain deep insights into your network, analyze configurations, paths, and access. Bolster your cybersecurity while maintaining compliance.

- + Ensure adherence to proper network zoning, bridging any gaps that may exist between your official network segmentation policy and the actual implementation within your hybrid network.
- + Optimize performance by identifying and eliminating shadow or redundant firewall rules and managing numerous firewalls through a centralized interface.
- + Automate firewall changes, with risk assessments conducted before provisioning new rules. Easily recertify firewall rules and generate the reports vital for compliance audits.

Choose the Skybox Continuous Exposure Management Platform to strengthen your security and stay ahead of evolving threats. Experience unmatched visibility, proactive vulnerability management, and streamlined network security and policy management. Empower your organization to protect critical assets with confidence.
