

Actisol

L'authentique fissuration

PROFILE VERTICALISATION

Actisol

THE ACTISOL NARROW TOOTH, FINE AND FLUID, ENSURES SOIL PENETRATION EVEN IN THE MOST EXTREME CONDITIONS.

It respects the structure without disturbing the various soil horizons and without diluting organic matter.

Its angle flange fastening on the 100x100 frame also offers custom uses and makes it a multi-purpose tooth.

Its Fissol concept facilitates part assembly and disassembly.

Its double spring system allows safe work on stony terrain. The shock wave effect sent to the tip improves cracking in compact soil.

FROM AUTUMN AND SPRING SOIL PREPARATION TO POST-HARVEST STUBBLE WORKING, INCLUDING FIELD AERATION AND REGENERATION AT THE START OF WINTER, ACTISOL HAS BEEN YOUR SOIL CAPITAL PARTNER FOR OVER 50 YEARS.

ACTISOL SUPPORTS YOU IN ALL YOUR SOIL PREPARATION WORK

Its unrivalled versatility allows you to manage various types of work (scalping, loosening, or cracking). A tandem roller with serrated bars ensures depth control and levelling on all plots.

A COMPREHENSIVE LINE TO EQUIP EACH POWER CLASS

to best improve 'Soil Capital' while saving fuel.

FISSOL HEAVY DUTY WEAR PARTS

that are manufacturer parts for Actisol's teeth to meet everyone's requirements.

EASY MAINTENANCE FOR ROBUST EQUIPMENT

ACTISOL'S NARROW TEETH

REINFORCED CENTRAL TWIN-BEAM FRAME

COMBINATION OF TWO TANDEM ROLLERS

Actisol

DEMETER » All-round agronomical work!

A RANGE OF FIXED MOUNTED TOOLS TO ALLOW MIXED FARMS TO TAKE FULL ADVANTAGE OF THE ACTISOL TOOTH'S POTENTIAL.

PRODUCT DESCRIPTION

- › ACTISOL TEETH: 5, 7, 9, 11, or 13
- › TOOTH CROSS-SECTION: 35 x 70
- › CLEARANCE UNDER TOOTH: 75 cm
- › AVAILABLE IN 3 BEAM VERSION : for high matter flow
- › WORKING WIDTH: 2.5 m to 4.3 m

OPTIONS:

- › Road signalling kit
- › Comb harrow
- › Scraper bar
- › Opener disc

TECHNICAL FOCUS

PIN DEPTH ADJUSTMENT

TANDEM ROLLER

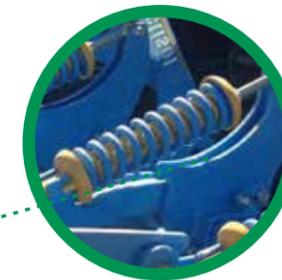

Combination of two tandem rollers. The Ø 540 cage roller manages and repairs the soil (other models available as an option to adapt to soil requirements: Wellsol⁽¹⁾ Flexsol⁽²⁾ / Unisol⁽³⁾ / Texsol⁽⁴⁾).

The exclusive Actisol Ø 510 Mixteur roller can be adjusted independently by hand cranks and notched bars. It promotes soil/straw mixing or, on a deeper setting, it prepares the seedbed. Depth is managed through pins on the depth scales.

INDEPENDENT MIXTEUR ROLLER ADJUSTMENT

INDEPENDENT DOUBLE SPRING SAFETY

REINFORCED FRAME

A reinforced 100x100 central twin-beam frame receives category 2 and 3N hitches. It is equipped with extension arms to adjust working width.

FOLDING EXTENSION

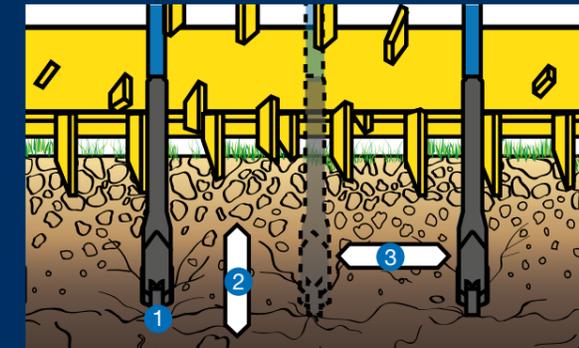

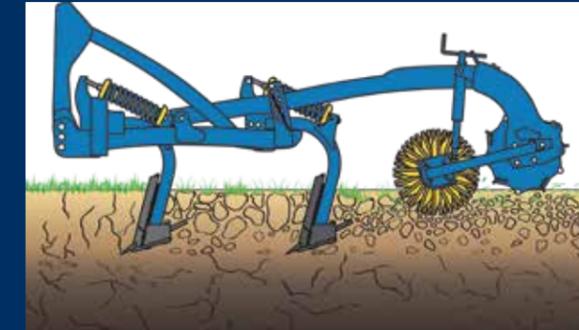

Folding extensions allow a modular configuration of the tool to adapt to available tractor power.

A+++

- › UNRIVALLED SCALPING OR CRACKING VERSATILITY
- › DEPTH AND LEVELLING CONTROL ON ALL PLOTS.
- › VARIED RANGE TO EQUIP EACH POWER CLASS

ACTISOL, YOUR SOIL CAPITAL PARTNER

Actisol supports you in all your soil preparation work in order to enhance 'soil capital' and promote biodiversity.

- 1 - The shock wave generated by the spring system travels to the tip
- 2 - The soil lifts and repositions itself
- 3 - The soil separates when the first row passes

- › Crack without destroying soil structure while maintaining bearing
- › Create the conditions for deep root growth without disturbing soil horizons
- › Improve soil capacity to drain and deliver water to crops
- › Stop soil erosion while respecting biological activity
- › Aerate the soil to stimulate bacterial activity

FISSOL PARTS

Various wear parts can be attached to the teeth to adapt to individual requirements with very limited maintenance.

In high-wear conditions, Fissol is available in carbide
