

We design and build (semi-) automatic machines and lines for the manufacturing of pallets, crates, furniture, garden products, timber frames for construction, etc. We start from a basic machine concept with the possibility of adding extra automation modules. This makes your machine at the desired degree of automation and it also fits perfectly into your budget.

AUTOMATED WOOD  
FASTENING PROCESSES

**Solutions**  
for Industrial Wood Fastening

# Solutions

for Industrial Wood Fastening

Speed, productivity and safety are key to any working environment. Our focus is on providing you with the most effective solution that will give your business:

- Production optimisation
- Cost reduction
- Quality improvement
- Safer working environments

## PALLETS

Production of pallet components and complete pallet assembly

## CRATES

Make anything from small boxes until very large panel boxes

## TIMBER FRAME CONSTRUCTION

Convert your 3D drawing into real building panels and walls

## GARDEN

Nailing, stapling or screwing your fencing or shed panels

## FURNITURE

From furniture parts to complete bed steads

## SPECIALS

Options such as nail detection, tools with saw, mill or drill, fast programming, manipulators, turn stations, conveyors, marking units, etc.
