

## **Uniconfort awarded the EcoVadis Gold Medal and confirmed among the world's most sustainable companies.**

Uniconfort, a leader in the design and installation of biomass plants for industrial applications, has been awarded the EcoVadis Gold Medal, entering the top 5% of the most sustainable companies worldwide in its sector. A select group of companies, the top 5% globally, receives this recognition, highlighting the best-performing organizations in terms of sustainability.

EcoVadis is one of the most prestigious international platforms for assessing corporate sustainability. Each year, it evaluates thousands of companies based on key criteria such as environmental protection, labor conditions and human rights, ethics, and sustainable procurement. The Gold Medal is the result of a continuous improvement journey, which began with the achievement of the Silver Medal in previous years and has been consolidated through the company's ongoing commitment to enhancing sustainability performance.

This achievement adds to the Sustainability Award promoted by Kon Group, Elite, and Azimut in 2024, as well as Uniconfort's inclusion in Forbes' list of the Top 75 most sustainable companies in Italy. This further demonstrates Uniconfort's commitment to a continuous and virtuous sustainability journey.

*"The EcoVadis Gold Medal recognizes our leadership in implementing ESG principles. It's a certification that confirms how sustainability is at the heart of our daily actions. It further motivates us to constantly challenge ourselves to improve what we do and how we do it." Davis Zinetti, CEO of Uniconfort*

Uniconfort stands out not only for its products, biomass plants that provide concrete solutions for industrial decarbonization, but also for the way they are designed and built: with responsibility, enthusiasm, and shared values.

The company will continue to strive to maintain high sustainability standards, with the goal of constantly innovating and strengthening its contribution to the energy transition.

---

### Company profile

Uniconfort specializes in the design, manufacturing, and installation of biomass plants for the production of thermal energy (hot water, steam) and cogeneration systems for combined heat and power. The company supports clients in adopting circular economy practices, using industrial process residues as fuel for its plants. Uniconfort's solutions follow the Lego Approach, which allows customization using standard components, reducing design, construction, and installation time and costs.

Headquartered in Italy with three branches in Europe, Uniconfort has installed over 3,000 plants in more than 40 countries, offering innovative renewable energy solutions that contribute to the decarbonization of industrial processes and the reduction of energy costs.
