VALUE FOR CLIENT
The PetalMD solution helps hospitals reduce operating costs, improve team coordination and optimize quality of care.

BUSINESS CASE
The management team wanted to eliminate the “paper” management of on-call rosters and to implement a digitized solution for their 6-hospital network.

VALUE FOR USER
The solution provides reliable information in real time on the on-call coverage, allowing time savings for administrative staff and doctor.

INSIGHTS
Network of 6 hospitals, 9 polyclinics, 960+ physicians and providers, 4,250+ employees, 700+ acute beds and 1,000+ acute care beds.

CASE STUDY OF GROUPE SANTÉ CHC (BELGIUM): DIGITIZING YOUR ON-CALL SCHEDULES TO BETTER MEET THE NEEDS OF PATIENTS
To meet the management and communication challenges for medical on-calls, the CHC care network decided to acquire the PetalMD solution.
The solution provides hospital staff with a consolidated overview of availability and on-call schedules for all medical services. The centralized information displayed on the PetalMD hospital platform is synchronized in real time and is accessible from any device. The centralization of information provides an overview that facilitates the identification of any gaps in the care coverage. Physicians can now swap shifts among themselves easily. It comes also with a secure messaging system that complies with the highest care safety standards and allows them to communicate effectively. It is now possible for administrative staff to have access to analytical reports that were previously inaccessible.
