#SAAS PLATFORM

VALUE FOR CLIENT

Our SAAS business model is very attractive for big corporation generating a lot of proprietary data that want to leverage these data with AI without compromising on their IP

BUSINESS CASE

Our mission is to help life science companies develop a more efficient and personalized medicine and agriculture by providing them with AI-powered software enabling modeling of biological systems.

VALUE FOR USER

Our platform is the ultimate R&D tools with extremely advanced in silico modeling capabilities built to be used by life scientist without expertise in computer science, bioinformatics, systems biology or machine learning.

INSIGHTS

Our platform is currently used for patient stratification, biomarker and target discovery. We also have projects in the agriculture sector.

PRECISION HEALTH & AGRICULTURE

Our platform is currently used: (1) for patient stratification and biomarker discovery as part of two clinical trials in oncology; (2) for stratification of patients with autoimmune diseases as part of a contract signed with a big pharma. We have a lot of traction with other big pharma on this kind of projects (3) on a breeding project in medicinal plants; (4) predicting milk production of a cow one year ahead of insemination as well as modelling the resilience of animals and herds to drastic changes in environmental conditions.

DATE OF CREATION

29/06/2016
